

# Personal Emergency Communications

Whether you're hit by a natural disaster or a power outage, you can expect your cell phones, landline phones, and internet to eventually stop working. What will you do? How will you communicate with your family and friends?

While you may have set aside food and water for an emergency, consider including long-range radios and batteries as well. Do you know which options are most effective for your needs?

This class will walk you through modern communications technologies and recommend implementing a realistic backup communication system, empowering you to take control of your emergency preparedness.

**Thinking about how you'll communicate after a natural disaster or power outage? This class will help you develop a reliable plan for these situations.**

Options Include:

- AM/FM, NOAA, FRS/GMRS, and Other Radios
- Satellite Phones and Personal Locator Beacons
- Amateur Radio – the King of Emergency Communications

Using simple recommendations, you'll be able to reliably communicate with others in your region without cell phone service, landline service, internet, or grid power.
